LAST PROJECTS

Workspace Finder Platform, Frontend Developer
May 2023 – present
An innovative platform for managing workspace, providing fast and convenient office space booking. The platform offers users a wide range of capabilities, from selecting suitable workspace to payment for services.

- Development and implementation of new features to expand the application's capabilities and enhance user experience.
- Migration of existing functionality to a new technology stack with modern design considerations, resulting in increased performance and efficiency of the application.
- Creation of responsive interface for the application, ensuring proper display across various devices and platforms.
- Refactoring of the client application structure to improve flexibility and scalability of development, significantly enhancing the project's workflow.

Technologies & Tools: TypeScript; React; SCSS; React Hook Form;

Pregnant Health & Wellness Platform, Frontend Developer
May 2022 – Apr 2023
An innovative healthcare platform for pregnant women, providing access to safe, effective, and convenient care. The platform includes both a mobile and web application, offering a wide range of medical services and informational resources.

- Development of new application features to enrich its capabilities and enhance user convenience.
- Refactoring outdated functions in accordance with modern development practices, contributing to improved performance and reliability of the application.
- Development of an adaptive application interface to ensure its correct display and functionality across various devices and platforms.
- Manual testing of the application on browsers and mobile devices to ensure its cross-platform compatibility and operational efficiency.

Technologies & Tools: TypeScript; React; Redux; GraphQL; Styled-components;

Invoice Integration Platform, Frontend Developer
Oct 2021 – May 2022
A web system designed to conveniently consolidate all electronic invoices from various connected portals into a unified interface. This innovative solution provides users with a simple and effective way to manage their finances, allowing them to quickly view and track invoices

- Developing new application features to enhance the processes of managing invoices and finances for users.
- Creating a set of user interface components based on provided designs, ensuring effective user interaction with the application.
- Refactoring the structure of the client application to increase its flexibility and improve the development process.

Technologies & Tools: TypeScript; React Hook Form; React; SCSS;
